VEROSINT

Account Visibility, Intelligence & Attack Detection

User account attacks are pervasive in digital business, with far reaching consequences for breaches including financial loss, business disruption, fraud, brand damage, data exfiltration, and more.

Identity management systems and event logs were never designed to provide the combination of deep visibility and behavioral analytics necessary to detect today's advanced attacks among thousands or millions of users, and 10's or 100's of millions of events generated every day.

Verosint stops cybercriminals from taking control of user accounts and attacking your business using AI-powered behavioral analytics and identity intelligence signals to provide instant notification and detection of account takeover, credential stuffing, account sharing, fake accounts, and other account-based attacks.

Detect, Notify, And Prevent Attacks

- Prevent account takeovers, credential stuffing and more
- Identity threat intelligence and alerts
- AI detection and automated prevention
- Fast, free and easy to setup

Discover & Prevent Attacks Before They Cause Harm

Verosint provides real-time account attack detection, notification, investigative tools, and automated security workflows for prevention. Verosint connects to your identity management/authentication system via APIs in minutes to provide unprecedented account visibility including an account fraud and attack dashboard, and actionable insights powered by AI.

Verosint starts by instantly discovering already compromised accounts and prior attacks on your platform, avoiding months of manual investigation and verification effort. Verosint prevents future attacks by detecting emerging threats and risk signals with AI and customizable risk profiling. Verosint then automates and optimizes security workflows to block cybercriminals while giving legitimate users a faster, easier user experience.

Block Attacks in Real-Time
Immediate and accurate results combining risk intelligence networks and AI behavioral analytics

Deep Account Visibility
Instantly see threats and risks missed by identity management systems and security event logs

Improve User Experience
Block cybercriminals while giving legitimate users a faster and easier user experience

Reduce Costs & Improve Efficiency
Rapidly detect, investigate and block threats before they cause harm with AI and customizable risk signals

STOP Account Attacks:
A Rapidly Growing Crisis

- **$635B/year**
  Financial losses

- **Over 3X**
  Annual increases

- **70 days**
  Average time to detect breach/fraud

- **76% leave**
  Attack victims will abandon your brand

verosint.com

The Verosint Platform

Only Verosint provides the deep account visibility and identity threat intelligence to effectively discover, notify, investigate and prevent account attacks in real-time. By combining multi-layered insights from OSINT, account activity data, and AI behavior analytics, organizations can improve security, reduce fraud and optimize user experience.

Unprecedented Visibility into User Accounts

- Account visibility dashboards provide detailed views into threats, risks, and emerging fraud patterns
- Auto-discover prior attacks and account compromise already on your platform in minutes
- Import prior historical data and get immediate results – no need to wait or train models

## Real-Time Attack Detection and Alerts

- Identify account takeover, credential stuffing, illicit account sharing, account opening attacks and much more
- Examine risk signals and anomalies across real-time event streams and millions of data points
- Boost investigation efficiency and accuracy with immediate insights to resolve cases quickly
- Incorporate custom risk signals, profiles and account tagging to customize for your unique use cases and business needs

Automate Security Workflows & Prevention

- Automate and orchestrate security workflows to challenge or block suspected cybercriminals at your door
- Recognize legitimate customers and give them the fastest, easiest user experience
- Use multi-factor authentication and identity proofing only when needed to reduce costs and user friction
- Optimize continuously by monitoring risks, detected threats, deployed prevention measures, and more.

Fast & Free with Actionable Results

✓ **Connect your existing authentication system and go.**

✓ **No software to install. Activate Verosint via secure APIs.**

✓ **Get a free account and instantly see threats and risks.**
