VEROSINT

Intelligence Identity Threat Detection and Response

User account compromise and attacks have far reaching consequences for organizations, including security breaches, business disruption, data exfiltration, financial loss, and more.

Identity management systems and event logs were never designed to provide the combination of deep visibility and behavioral analytics necessary to detect attacks in real-time. These traditional prevention measure are insufficient at stopping modern attacks and detection happens too late after the damage is already done.

Verosint stops cybercriminals from taking control of user accounts and attacking your business using AI-powered behavioral analytics and identity intelligence signals to provide instant detection of account takeover, credential stuffing attacks, insider threats, and more.

Stop Advanced User Account Threats

- Real-time detection of threats that circumvent traditional prevention
- Unprecedented user account visibility
- AI behavioral analytics and identity intelligence
- Fast, free and easy to setup

Discover & Prevent Attacks Before They Cause Harm

Verosint provides real-time account attack detection, notification, investigative tools, and automated security workflows for response. Verosint connects to your identity management and event log systems via APIs in minutes to provide unprecedented user account visibility and actionable insights to detect and prevent attacks powered by AI.

Verosint starts by instantly discovering already compromised accounts and prior attacks on your platform, avoiding months of manual investigation and verification effort. Verosint prevents future attacks by detecting emerging threats and risk signals with AI and customizable risk profiling. Verosint then automates and optimizes security workflows to block cybercriminals while giving legitimate users a faster, easier user experience.

Stop Account Compromise:
A Rapidly Growing Crisis

- **61%**
  of all breaches exploit user accounts
- **3.3X**
  Annual increase in attacks
- **292 days**
  Average time to detect & remediate
- **$4.8M**
  Average cost of an attack in 2024 brand

🛡 Block Attacks in Real-Time
Immediate and accurate results combining risk intelligence networks and AI behavioral analytics

⚠ Deep Account Visibility
Instantly see threats and risks missed by identity management systems and security event logs

👤 Improve User Experience
Block cybercriminals while giving legitimate users a faster and easier user experience

🔒 Reduce Costs & Improve Efficiency
Rapidly detect, investigate and block threats before they cause harm with AI and customizable risk signals

verosint.com

The Verosint Platform

Only Verosint provides the deep account visibility and identity threat intelligence to effectively detect, notify, investigate and prevent account attacks in real-time. By combining multi-layered insights from OSINT, account activity data, and AI behavior analytics, organizations can improve security, productivity, user experience and lower costs.

Unified Observability

- Account visibility dashboards provide detailed views into threats, risks, and emerging fraud patterns
- Auto-discover prior attacks and account compromise already on your platform in minutes
- Import prior historical data and get immediate results – no need to wait or train models

AI Powered Detection

- Identify account takeover, credential stuffing, illicit account sharing, insider threats and much more
- Examine risk signals and anomalies across real-time event streams and millions of data points
- Boost investigation efficiency and accuracy with immediate insights to resolve cases quickly
- Incorporate custom risk signals, profiles and account tagging to customize for your unique use cases and business needs
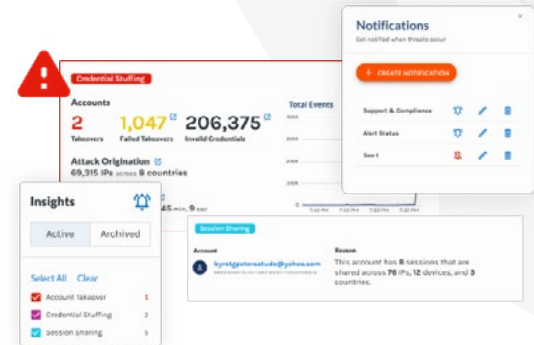

Automate Prevention

- Automate and orchestrate security workflows to challenge or block suspected cybercriminals at your door
- Recognize legitimate users and give them the fastest, easiest user experience
- Use multi-factor authentication and identity proofing only when needed to reduce costs and user friction
- Optimize continuously by monitoring risks, detected threats, deployed prevention measures, and more.
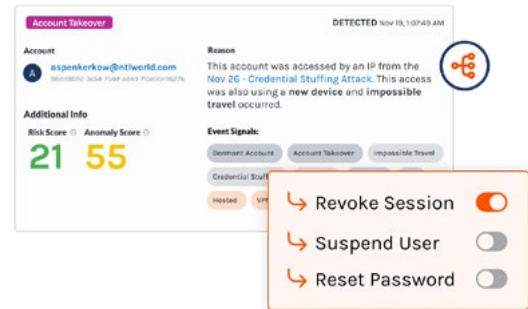

Fast & Free with Actionable Results

✓ **Connect your existing authentication system and go.**

✓ **No software to install. Activate Verosint via secure APIs.**

✓ **Get a free account and instantly see threats and risks.**
